

CODING & CORE SOLUTION IMPLEMENTATION

Team ID: SWTID-2026-3238 | Project Name: PocketSmart AI | Track: AI-ML & Generative AI

1. Gemini GenAI Integration Service

```
# app/services/gemini.py
from google import genai
from app.config import settings

def get_gemini_client():
    if not settings.GEMINI_API_KEY:
        return None
    return genai.Client(api_key=settings.GEMINI_API_KEY)

async def enrich_recommendations_with_gemini(planner_type: str, context: dict, image_bytes: bytes = None):
    client = get_gemini_client()
    if not client:
        return get_fallback_recommendations(planner_type, context)

    try:
        prompt = build_planner_prompt(planner_type, context)
        contents = [prompt]
        if image_bytes:
            contents.append(genai.types.Part.from_bytes(data=image_bytes, mime_type="image/jpeg"))

        response = client.models.generate_content(
            model=settings.GEMINI_MODEL,
            contents=contents
        )
        return parse_gemini_response(response.text)
    except Exception as exc:
        return get_fallback_recommendations(planner_type, context)
```
